

# **Flying to a higher level of Safety**

## **North Star Practices Memorandum**

We the undersigned wish to see our staff, contractors and our peers provided with the safest and most reliable means of transportation possible. Transporting personnel to and from work is an essential element in how many of us reach the jobsite, and how these activities are conducted must be founded on achieving the highest level of safety.

Travelling by Float Plane can pose challenges when weather, operational conditions and pressing schedules are added to what we consider a vital means of travel. We understand these concerns all too well. However, when safety is involved, we expect it to take a front seat.

Recently, Forest Industry representatives and The Float Plane Operators Association agreed that a set of safety practices should be drafted and implemented that would address and improve upon safety. The North Star Practices was the result of these discussions and we the undersigned support the implementation of the North Star Practices for float plane service providers, contractors and staff.

By signing this document you commit to supporting the implementation of the North Star Practices within all operations utilizing float plane services for transport of workers and contractors.
